DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The USPTO "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" (Official Gazette notice of 22 November 2005), Annex IV, reads as follows:

Claims that recite nothing but the physical characteristics of a form of energy, such as a frequency, voltage, or the strength of a magnetic field, define energy or magnetism, per se, and as such are nonstatutory natural phenomena. O'Reilly, 56 U.S. (15 How.) at 112-14. Moreover, it does not appear that a claim reciting a signal encoded with functional descriptive material falls within any of the categories of patentable subject matter set forth in Sec. 101.

- ... a signal does not fall within one of the four statutory classes of Sec. 101.
- ... signal claims are ineligible for patent protection because they do not fall within any of the four statutory classes of Sec. 101.
- 2. Claim 7 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter as follows. Claim 7 defines a "computer data signal embedded in a carrier wave and representing a program for controlling a computer to perform" with descriptive material. While "functional descriptive material" may be claimed as a statutory product (i.e., a "manufacture") when embodied on a tangible computer readable medium, a "computer data signal embedded in a carrier wave and representing a program for controlling a computer to perform" embodying that same functional descriptive material is neither a process nor a product (i.e., a tangible "thing") and therefore does not fall within one of the four statutory classes of § 101. Rather, "signal" is a form of energy, in the absence of any physical structure or tangible material.

Allowable Subject Matter

3. Claims 1-6 are allowed.

The following is an examiner's statement of reasons for allowance:

4. As to claims 1 and 6, none of the prior art teach or fairly suggest the limitations of a control unit that "receives an acquisition request for acquiring the image information regarding the image information, and the response information, which are associated with one another, from said terminal", in combination with the other limitations of claims. The prior art of USPN 5,504,674 to Chen et al. discloses an image data management system comprising a control unit that receives image information of a device having a damage and/or a problem and information regarding the image information, which are associated with each other, from said image photographing device, stores the received image information and information regarding the image information, which are associated with each other, in said storage unit, sends the image information and the information regarding the image information, which are associated with each other and stored in said storage unit, to an analysis-use terminal device for conducting an analysis on a damage and/or a problem of a device, receives response information for responding to the sent image information and information regarding the image information from said analysis-use terminal device and stores the received response information in said storage unit in association with the image information and the information regarding the image information, which correspond to the response information, see column 14, line 40 – column 15, line 2. However, Chen et al. does not teach or fairly suggest receiving a an

Art Unit: 2624

acquisition request for acquiring the image information regarding the image information, and the response information, which are associated with one another, from a terminal, as disclosed in the limitations of claims 1 and 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

USPN 6,177,287 to Steffan et al. discloses an image data management system including imaging defects and allowing a user to review the defects.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aaron W. Carter whose telephone number is (571) 272-7445. The examiner can normally be reached on 8am - 4:30 am (Mon. - Fri.).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jingge Wu can be reached on (571) 272-7429. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
